ClimateMaster® Rebate Center Makes Geothermal Energy More Affordable

Partnering with EcoRebates, ClimateMaster has created a single online tool to find federal, commercial and local incentives to help homeowners and commercial businesses save

OKLAHOMA CITY, Okla. and MENLO PARK, Calif. (Feb. 3, 2025) – ClimateMaster, a leader in geothermal HVAC systems, has partnered with EcoRebates to launch the ClimateMaster Rebate Center. This user-friendly web tool tracks thousands of rebate programs from federal, state and local utilities and energy service providers, offering cash-back for purchasing energy-efficient HVAC equipment. Homeowners and commercial entities can quickly find the thousands of dollars available from rebate and incentive savings based on their location.

For commercial projects, the ClimateMaster Rebate Center highlights eligibility for Direct Pay/Elective Pay options and credit transferability, simplifying benefits for tax-exempt organizations. Homeowners can find available savings in their zip code to make more informed decisions when selecting energy-efficient geothermal heating and cooling solutions. This tool highlights when incentives stack together to best support equipment selection and installation decisions, helping to maximize both environmental and financial benefits.

“We created a powerful online search tool to help reps, distributors, and owners find rebates and maximize savings,” said Jeffrey Pham, Marketing Director at ClimateMaster. “Our solution allows you to stack incentives to make geothermal more affordable for everyone.”

“ClimateMaster is a leader in geothermal technology, innovating high-efficiency ground source heat pumps and equipment,” added Brett Battles, Co-Founder and CEO at EcoRebates. “We’re pleased to partner with them to deliver these valuable incentive savings opportunities to their customers.”

To learn more and access the ClimateMaster Rebate Center and the EcoRebates tool, visit info.climatemaster.com/rebatecenter.
